

Patco Industries, Inc.

SINCE 1984

Rail Clamp Connector

Patco Industries' Rail Clamp Connector when installed properly, provides a zero ohm connection to the rail with the capacity to carry any type of current to the rail. The RCC eliminates the need for drilling, welding, and grinding for track connections. The RCC has 4 entry points on each end for bond strand to be attached, and can be used for wires, bonds, and hardwire shunts. Also the RCC attachment has been diamond cut on the underside to create a solid connection. The RCC can be used on 115# to 136# rail, but can be custom made for any other size rail. Each RCC kit comes with one RCC unit, all hardware, Loctite for hardware, and No-Oxide grease.

Diamond cut, pictured above

Advantages

- ***No more grinding, welding, or drilling rail***
- ***Easy removal of bond wire from track connector for any track work being performed***
- ***No more tearing of bond wire***
